

How Educators Can Assist Learners in Developing a Growth Mindset

by Jackie Gerstein, Ed.D.
User-Generated Education

The infographic is divided into two main sections. The top section features a silhouette of an educator with glasses, surrounded by four thought bubbles containing beliefs about student learning. The bottom section features a silhouette of the same educator with glasses, surrounded by nine speech bubbles containing reflection questions. The background is a light beige color with a dark brown border at the top and bottom.

Beliefs:

- I believe that all students can learn and be successful.
- I believe that I should assist students in believing that they are good & powerful learners.
- I believe that all learners are smart in their own unique ways.
- I believe all students should be challenged and be rewarded for taking risks and rising to challenges.

Reflection Questions:

- Were my expectations clearly presented to learners?
- Did I set and maintain a climate to learn from mistakes and failure?
- Did I set a forum for learners to receive authentic feedback from me, peers, and experts?
- Did I provide the resources and scaffolding if and when needed?
- Did I provide the time and resources to address learner questions and confusions?
- Did I praise effort, resourcefulness, and resilience?
- Did I ensure that learners were engaged in and motivated by the work?
- Did my learners and I consider and use best practices for similar work?
